Hardy Hydrangea BLUE BOY

A lovely intense light blue Hydrangea of rare exquisite beauty, producing in abundance its glorious blue flowers in immense clusters that measure from 6 to 10 inches in diameter. While hardy in Missouri we recommend a light covering for winter protection. Without exception this Hydrangea is the finest all-blue flowering shrub in cultivation. We suggest to multiply the intensity of the blue color that in planting, a few rusty nails are placed in the hole before setting the plant, and a small amount of Aluminum Sulphate is applied around the plant each season.

Strong plants from 3-inch pots, each, 50c; 3 for \$1.25. Large plants, 75c; 2 for \$1.45, postpaid.

Archias' Best TOMATOES

NEW!

Wilt-Resistant Tomato — TOPSALL —

(72 days.) A distinct, new, all-purpose Tomato. **Topsall** is a medium early variety that continues to bear throughout the season. The vines are strong and vigorous like Marglobe. The fruits are nearly round, weighing on an average of 6 ounces. The meat is extremely solid, with few seeds. **Topsall** ripens evenly, a bright scarlet-red all the way through. Being a heavy yielder and resistant to both blight and rust, it makes an ideal Tomato for table use and canning. Market gardeners like **Topsall** because it never fails to make them money. Although **Topsall** was only introduced by us in 1937 it has become the most popular Tomato in Central Missouri today. Like its name, it tops all.

Pkt., 15c; 1/2 oz., 35c; oz., 50c; 1/4 lb., \$1.50; lb., \$4.50; 5 lbs., \$20.00.

CULTURE. One ounce of seed will produce about 2000 plants. Sow seed in March and April in the hotbed, or in pots in a sunny exposure in the house. Transplant when 2 or 3 inches high. When ground has become warm, transplant, on a rainy or cloudy day. Set the plants 4 by 4 feet, 3000 plants per acre; the dwarf sorts may be planted closer.

"Black Leaf" Worm Pellets

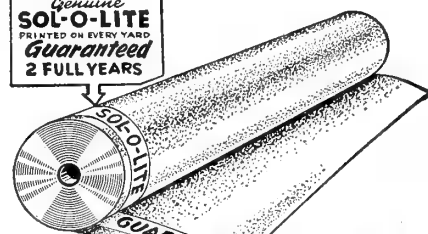

"Black Leaf" Worm Pellets offer a safe, effective control for poultry roundworm. They contain nicotine in odorless, tasteless, and shockless form — no toxic shock to the fowls to throw them off feed or off production, because the nicotine is not released until it reaches the intestines, the seat of roundworm infestation. A half-pellet is recommended for fowls weighing less than 2 lbs., and for heavier fowls, a whole pellet is the proper dose. 25 pellets, 35c; 50 for 65c; 100 for 85c; 1000 for \$5.95.

Sterilizer — Disinfectant DEODORANT

The use of B-K for sterilizing milk utensils, coolers, bottle fillers, pipings, vats, and other equipment gives higher germicidal efficiency at lower cost. Bottles sterilized with a cool solution of B-K do not have to be stacked for cooling before using nor is there danger of breakages. The cost of sterilizing with B-K is so low that it is a fraction of a cent for several thousand bottles.

B-K is made in both liquid and powder form.
